# **ANNUAL REPORT 2021**

December 2021

# Message From Directors

Dear Supporters,

2021 was a huge year for the foundation and we could not have done it without you. We are also so appreciative of Point Balance Acupuncture in Colorado Springs, Colorado as our first sponsor. Thank you to all. This was our first full year as an official 501(c) organization and great things seemed to occur continuously.

Although in-person activities were back, 2020 made us realize virtual activities were just as important as the in-person ones in 2021.

As a Private Foundation, Neuro Endurance Sports Foundation seeks to increase awareness, foster enthusiasm, and support for brain science through community activity and sports virtually as well as in-person. In the Annual Report, you will read about the events and organizations we supported, the impacts we made, and our financial report.

Alzheimer's disease is the sixth-leading cause of death in the United States with more than 6 million Americans living with the disease. 1 in 3 seniors die with Alzheimer's or another dementia and kills more individuals than breast cancer and prostate cancer combined. More than 11 million Americans provide unpaid care for people with Alzheimer's or other dementias and in 2020 alone these caregivers provided an estimated 15.3 billion hours of care valued at nearly \$257 billion.

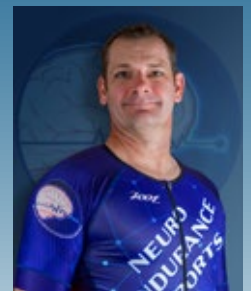

Nearly 13,657 children (0-14 years old) are part of the estimated 700,000 Americans living with a primary brain tumor. For individuals 15-39 years old, brain tumors are the third most common cancer overall, the second-most in males, and third-most common in females. For those over 40 brain tumors are the eight-most common cancer overall, ninth-most among males, and fifth-most among females in this age group.

Nearly 1 million people in the United States and over 10 million people worldwide are living with Parkinson's disease. Approximately 60,000 Americans are diagnosed with Parkinson's disease each year. The combined direct and indirect cost of Parkinson's, including treatment, social security payments and lost income is estimated to be nearly \$52 billion per year in the United States alone.

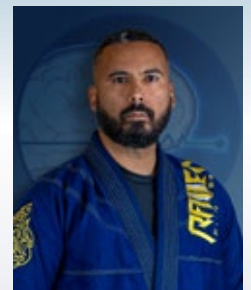

Alzheimer's, brain cancer, and Parkinson's disease are all progressive diseases that take an extreme toll on the individual and caregivers. The physical and mental endurance required during a diagnosis and treatment is extreme. The Neuro Endurance Sports Foundation and the people suffering Alzheimer's, brain cancer, and Parkinson's disease appreciate your generous support and we urge you to continue to bring awareness to these degenerative diseases.
